Option 1:

SafeRoute AI — Smarter Ways to Travel

Problem it solves: People may feel unsafe walking alone or traveling through unfamiliar areas.

Who would use it: Students, commuters, and people traveling to new places.

How AI helps users: AI compares available routes using factors such as lighting, sidewalks, and verified safety information.

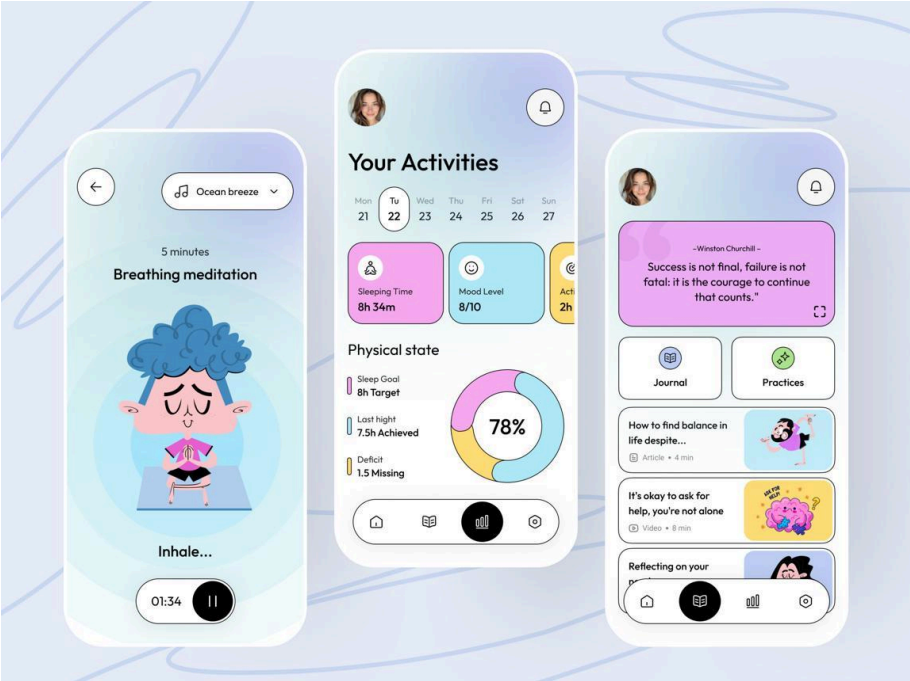

Three main features:

1. Smart Routes: Suggests routes based on user preferences.
2. Trusted Contacts: Lets users share their trip progress with trusted people.
3. Arrival Alerts: Notifies trusted contacts when a user reaches their destination.

Why people would find it useful: It helps people plan trips and feel more prepared when traveling. Safety ratings would be suggestions, not guarantees.

Option 2:

MindBridge AI — Student Well-Being Support

Problem it solves: Students can feel overwhelmed by schoolwork, social pressure, and other daily challenges but may not know where to find support.

Who would use it: Middle school and high school students.

How AI helps users: AI offers supportive check-ins, suggests healthy ways to manage everyday stress, and helps users find appropriate school or community resources.

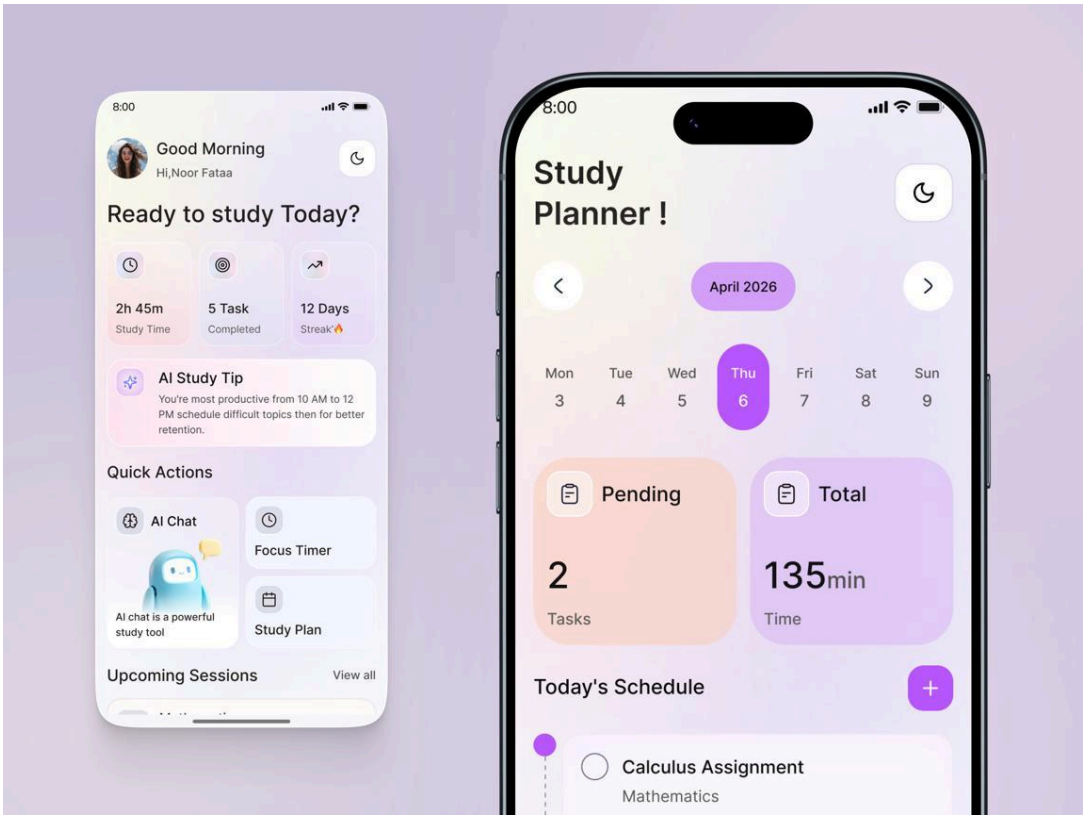

Three main features:

1. Mood Check-In: Allows students to record how they feel and notice patterns over time.
2. Personalized Coping Tools: Suggests activities such as guided breathing, journaling, or taking a study break.
3. Support Finder: Helps students find school counselors and trusted support services.

Why people would find it useful: It encourages students to care for their well-being and makes it easier to discover support when they need it. It would support—not replace—qualified counselors and other trusted adults.

Option 3:

StudySmart AI 📚

Problem it solves: Students struggle to organize homework, prepare for tests, and understand difficult subjects.

Who would use it: Middle school, high school, and college students.

How AI helps: AI learns which topics a student struggles with and creates personalized study materials.

Three main features:

1. AI Study Planner: Organizes assignments and creates a study schedule based on deadlines.
2. Smart Quiz Generator: Turns notes into practice questions and flashcards.
3. AI Homework Helper: Explains difficult concepts step by step instead of just giving answers.

Why people would find it useful: It helps students stay organized, understand lessons, and study more effectively without feeling overwhelmed.

My Final App Idea: **StudySmart AI**

App Name

My app is called StudySmart AI. It is an AI-powered mobile app designed to help students study more effectively and stay organized.

Problem My App Solves

Many students struggle to manage their homework, prepare for tests, and understand difficult subjects. StudySmart AI helps solve these problems by creating study schedules, generating practice quizzes, and explaining concepts step by step.

Who Will Use My App

My app is designed for middle school, high school, and college students. It can help students who want to improve their grades, manage their time, and feel more prepared for exams.

Why I Chose This Idea

I chose this idea because many students like me struggle with schoolwork and need better ways to study. I believe AI can make learning easier by providing personalized study tools that help students understand their lessons and become more confident.
